

Offline benchmark compare

Toy packers teach mechanism

Fair compare rules

- Use identical input and the same outline
- Fix seeds when search is randomized
- Report the same metrics on both sides
- If a reference engine is missing
- A clean I/O contract matters more than a flashy chart

What good looks like

- Expect your educational engine to be slower and sometimes lower quality
- That's fine
- You're looking for legal packings, non-negative deadspace consistent with areas
- Huge unexplained wins usually mean a metric mismatch

Your turn

- Follow the examples file, fill the comparison table, and finish the checklist
- Bring one discrepancy and a short hypothesis into your notes
- Then continue to the wrap module to close the course
