

You can now

Run a one-pass placement feedback on a tiny chip

Dual-track recap

- If you stayed in the browser, implement RUDY and overflow once in Python
- If you stayed in Track A, skim the heat-map lab so the colors match your matrices

Pitfalls to remember

- Units between estimators, clamp-and-floor GCell indexing

Next

- Complete the quiz for this part
- Natural next steps are `learn_global_routing`

Checklist

- Name three algorithms and one strength each
- Say which idea you reach for on a center-clustered seed
- Pick your next course README

Close

- When you are ready, take the short quiz, then open the next course
