

Offline benchmark compare

Toy legalizers teach mechanism

Fair compare rules

- Identical input JSON, same row/site rules, fixed seeds if randomized
- Report the same metrics on both sides
- Missing reference tools?
- Still run your harness and document the gap

What good looks like

- Educational engines may be slower, that is fine
- Look for legal outputs, stable displacement totals, and plausible HPWL
- Unexplained huge wins usually mean unequal metrics or skipped legality checks

Your turn

- Follow EXAMPLES.md
