

Placement path complete

You've walked the placement path, from HPWL and net models, through force, quadratic, analytical

What you can do now

- You can compute HPWL, compare net models
- You know why density bins matter and how spreading relieves overlap
- You can weight critical nets
- You are not shipping a foundry placer

Close the gaps

- If you mainly watched browser labs
- If you mainly coded, re-open any skipped visual labs
- Either track works for self-study

Next

- Complete the quiz for this part
- Natural next steps are learn legalization, for snapping and overlap removal

Your turn

- Review the wrap checklist
- Name three algorithms and one strength each
- Say which idea you'd use when a net is timing-critical
- When you're ready, take the short quiz, then open the next course README
