

Legalization path complete

Global vs detailed pipelines

What you can do now

- You can explain why legalization follows global placement
- You can check row/site legality, snap floats, clear overlaps, and pack rows
- You can respect fixed macros and report displacement alongside HPWL
- You are building algorithm literacy, not shipping a foundry legalizer

Close the gaps

- If you mainly used browser labs
- If you mainly coded, skim browser walkthroughs for visual row intuition
- Placement prereqs should feel connected: floats in, legal sites out

Next

- Complete the quiz for this part
- Natural next steps are detailed routing and congestion-aware flows

Your turn

- Review the wrap checklist
- Name three packing strategies and when you'd pick each
- When ready, take the short quiz, then continue along the PD path
