

STA path complete

You've walked the STA path

What you can do now

- You can build a levelized timing graph, propagate tags, compute slack
- You know when a full rebuild is wasteful and when an incremental cone update is enough
- You treat false paths and multicycle checks as engine data, not magic
- You are not shipping a foundry timer

Close the gaps

- If you mainly watched browser labs
- If you mainly coded, re-open any skipped visual labs when they ship
- Either track works for self-study

Next

- Complete the quiz for this part
- Natural next step is learn SDC

Your turn

- Review the wrap checklist
- Name five ideas from this course and one strength each
- Say which idea you'd use after inserting a buffer on a critical net
- When you're ready, take the short quiz, then open the learn SDC README
